

BOA Digital Technologies

A brand new, purpose-built 11-18 academy delivering
a specialist education in creative and
digital technologies

Imagine Everything

Coding | App & Software Development | Games Development | Digital Marketing | Ai & Robotics

OUR VISION

BOA Digital Technologies is a brand new academy for 11-18 year olds. Opening in September 2022 to 120 Year 7s, our vision is for a creative and distinctive curriculum, outstanding partnerships with industrial experts and a truly innovative experience for our students. It will be a stimulating environment at every level, pushing the boundaries of traditional teaching.

Digital technologies are developing at a fast rate and are here to stay. These range from app development, virtual reality to artificial intelligence. Industries are reporting a growing demand for a workforce equipped to meet the need for higher level digital skills.

Through our creative teaching, commitment to digital skills development, state of the art technologies and a digital-led curriculum delivered in partnership with industry professionals, we will make learning interesting, relevant, and engaging, and provide unrivalled opportunities for students to gain real-life industry experience and so future-proof their careers.

CURRICULUM

Our curriculum is carefully designed to meet the needs and aspirations of every student by blending traditional models of learning with a pioneering digital-led approach.

Students at BOA will study the core subjects of English, maths and science alongside wider National Curriculum subjects such as history, geography, modern foreign languages, PE, computer science and coding. State of the art digital equipment and a creative approach to teaching will bring the learning to life. Technology projects will give students unrivalled opportunities to develop higher level digital skills, working alongside industrial experts.

All staff will apply elements of creative thinking and arts-based competencies in their lesson planning and delivery. This, combined with the potential of digital technology, will promote a brand-new form of classroom learning which creates opportunities for open questioning, risk taking, problem-solving and critical thinking.

KEY STAGE 3
